The completion of a building permit application is required for alterations or additions to a permanent or accessory structure, any new construction, concrete work, storage buildings, decks and fences. Certain maintenance projects may not require a building permit, however an application must be completed and placed on file for review by the building inspector and City Council. Demolition projects may require a fee for permit and have an associated cost for disposal in the city landfill. All work must be completed within **TWO** years of the approval date and **no work may start until application has been approved by the City Council**. Application must be submitted **at least one week prior** to City Council meeting to be placed on agenda for approval.

The current process for obtaining a building permit is as follows:

1. Applicant completes required form and pays any necessary fees.
2. Applicant should have project area marked for pre-construction inspection.
3. Public Works Department and Building Inspector will be contacted to review application.
4. Building Inspector reviews application and project based on City Zoning Ordinances and makes recommendation to City Council for approval.
5. Letter/Notice sent to applicant to proceed as stated in application and listing any comments or conditions by City Council OR a notice to halt any planned action due to concerns.
6. Applicant to notify Building Inspector prior to any construction to schedule start day inspection.
7. Building Inspector verifies approved application is being followed.
8. Permit is presented to applicant.
9. Applicant is required to obtain the curb box, corporation cock, curb valve and 5/8" water meter from the City. Any substitutions need City approval. The City will tap water main.
10. Applicant or contractor is responsible for all repairs related to plumbing and sewer work, all excavations in the public streets or alleys, the cutting and replacing of pavement, laying of water and sewer connections and connections to storm water sewers and all construction of private sanitary drains and cesspools within the corporate city limits.
11. Such repairs to be executed only by a North Dakota Licensed master plumber or other persons as have obtained a North Dakota general contractors license for such work.
12. Jobs shall be completed under the direction of City employees and costs will be borne by the property owner.

Demolition: For demolition of a building, the foundation must be removed at least 1 foot below grade and filled to include 6 inches of black dirt on top. Concrete, brick and rubble must be taken to the south landfill. Capping of water and sewer lines is required. Asbestos inspection is required for commercial property.

"This institution is an equal opportunity provider and employer."
